

Green Effects Fund FACTSHEET

JULY 2018

Fund Objectives

The objective of the fund is to achieve long term capital growth through a basket of ethically screened stocks. The fund invests in a wide range of companies with a commitment to either supporting the environment or demonstrating a strong corporate responsibility ethos. Sectors such as wind energy, recycling, waste management, forestry and water-related businesses all feature prominently within the fund. The fund can only invest in the constituents of the Natural Stock Index (NAI) which was set up in 1994 and currently consists of 30 global equities.

Sector Exposure Compared to a Traditional Global Equity Fund

The fund does not invest in banks, oils, mining, metals or large cap technology stocks. From a performance and relative returns perspective this is something that all investors should bear in mind when considering investing in the fund. The overriding investment theme from a sectoral perspective remains that of alternative energy, water, waste management and similar companies with a strong corporate social responsibility (CSR) focus in both their culture and work practices.

Manager's Commentary

The Green Effects fund price ended June at **€210.73** which represented a return of **-0.19%** on the month. Year to date the fund has returned **+2.13%**. It was quite a busy month on the economic front and a strong US economy gave the Federal Reserve (Fed) the confidence to raise interest rates again in June and signal two further hikes to come this year. Closer to home, after a string of disappointing data and still low core inflation, the European Central Bank (ECB) announced that interest rates will not be going up until at least the summer of next year, although they did confirm that eurozone quantitative easing would come to an end by the end of this year. Unfortunately, the recent weakness in the euro (vs \$) has not benefited European equities. A sharp increase in Italian government bond yields, in reaction to the potential risk of fiscal changes from the new government, impacted sentiment towards the European market. From a regional equity market perspective the fund is currently 27% invested in the US and 36% in Europe. The exposure to Asian equities is currently 19%. Over the coming months we are monitoring markets with a view to reducing US equity market exposure and adding to European and Asian holdings within the Fund.
